ABSTRACT OF THE DISCLOSURE

TECHNOLOGY CENTER R3700

B1
A prefabricated, self-supporting, modular radiating panel with a sandwich structure comprises a layer of plasterboard and a layer of heat-insulating material. The plasterboard layer incorporates, internally, several continuous pipes which are designed to form independent hydraulic circuits and the end portions of which emerge all along a same edge ~~in a rear and lateral zone~~ of the panel. The independent hydraulic circuits are each housed in adjacent modular ~~zone~~ zones of the panel, the zones being separable from one another so as to provide panel parts of different sizes in a modular manner.
